

Dave Lee

Who I Am

I currently lead a multidisciplinary team of 10+ digital professionals, including Developers, QA Specialists, Experience Designers, and Content Strategists. As a hands-on manager, I balance leadership with technical execution, helping remove roadblocks, guide architecture decisions, and support the team wherever needed. Throughout my career, I've overseen the successful launch of more than 70 digital projects while building a culture centered on trust, collaboration, and individual project ownership rather than micromanagement.

I enjoy solving complex technical problems just as much as helping people grow. Whether I'm reviewing code, designing cloud infrastructure, or collaborating across other departments, my goal is always the same: help the team succeed and leave every project better than I found it.

What I Bring

Management:

8+ years fostering a collaborative environment to help team members hone their skills and advocate for them every step of the way.

Modernization:

Lead the transformation of legacy platforms through headless architectures, CI/CD pipelines, cloud-native infrastructure, and modern development practices.

Security:

CompTIA Security+ certified with experience implementing secure development practices, cloud security, and RMF for government ATO submissions.

Delivery:

Successfully led the launch of 70+ digital projects ranging from enterprise CMS platforms to large-scale public websites.

Tech Leadership:

Bridge the gap between technology and business by guiding architecture decisions, mentoring teams, and contributing directly to complex technical challenges.

DevOps & Cloud:

Design, deploy, and maintain secure, scalable AWS infrastructure supporting enterprise applications and high-traffic websites.

AI:

Contribute to a cross-agency working group to develop rules for ethical use of AI on client work as well as contributing to agency-specific AI usage guidelines.

Languages/Frameworks:

JavaScript/React/NextJS, Ruby, PHP, MySQL, Bash, headless and traditional CMSs such as Strapi, Sanity, WordPress, and Drupal.

Where I've Been

MullenLowe
